

Assignment Sheet

(Session: 2023-24)

Assignment No	string	Subject	string
Branch	string	Semester	string
Unit	Multiple Units	Faculty	string
Date Given	string	Submission Date	string

Q.No	Questions	CO	Marks
Q1	Explain the concept of stationarity in time series data and describe two methods for achieving stationarity before applying time series models	CO1	2
Q2	Compare and contrast the ARIMA and Exponential Smoothing models in terms of their suitability for forecasting non-seasonal, non-trend time series data	CO1	2
Q3	Describe the process of sequence padding and why it is an essential step in preparing sequential data for training RNN-based models	CO1	2
Q4	Discuss the role of dropout in preventing overfitting in LSTM networks and provide a guideline for choosing an optimal dropout rate	CO1	2
